

TIAT Releases Mobile-Friendly Website

Tokyo International Air Terminal Corporation has released a mobile-friendly version of its website (<http://www.tiat.co.jp/>).

Browsing corporate websites on mobile phones has become increasingly common. Consequently, TIAT has produced a new mobile-friendly website so that pop-up pages and other contents are accessible on mobile phones.

The public can now use their mobile phones to view the attractions in the international terminal (Haneda Nihonbashi, Edo Koji, the planetarium, etc.) as well as corporate video presentations. Haneda View 360°, a collection of video presentations of the facilities inside the international terminals taken with the recently developed 360° camera, is also available on the mobile-friendly site and users can look around the terminal with a slide of the finger. Our mobile-friendly website is full of convenient, exciting, user-friendly terminal information for your enjoyment.
